Subject:

Rush search request for 09/580523

Please search in commercial data base and issued patent file:

1) SEQ ID NO:1

2) SEQ ID NO:1, without Serine, or glycine or alanine at amino acid position 118.

3) SEQ ID NO:1 having alanine at amino acid position 118.

4) Amino acid sequence 103-123 of SEQ ID NO:1.

5) An amino acid sequence comprising the amino acid sequence 143-168 of SEQ ID NO:1, but no serine at amino acid position 118.

6) Please search SEQ ID NO:1 against the parent case 60/136783 for priority date.

Thank you MINH TAM DAVIS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 13,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This protein, which shares structural and chemical homology with Bcl-2, is involved in cell proliferation. Its coding sequence was isolated by screening a synovial tissue cDNA library using a computer search for amino acid sequence alignments. The gene and protein can be used in the treatment of various cancers, disorders with associated inflammation such as Addison's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel polynucleotide and polypeptide sequences of proteins associated with cell proliferation for diagnosis, prevention and treatment of e.g. cancer, acquired immunodeficiency syndrome, and Parkinson's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; cell proliferation; APOP-1; cancer; inflammation; infection; trauma; neurodegenerative disease; ischaemic injury; wasting disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                       used to obtain apoptosis enhancing compounds to treat or prevent diseases characterised by the loss of apoptotic cell death, such as cancers, e.g. lymphoma and hormone dependent tumours, autoimmune
             The present sequence is the human Bcl-xL/Bcl-2 associated death promoting polypeptide, Bad, the binding of which to Bcl-XI results in the induction of programmed cell death, i.e. apoptosis. Bad can be used in screening assays for compounds to treat or prevent diseases characterised by apoptotic cell death, such as neurodegenerative disorders, e.g. Alzheimer's and Parkinson's disease, amyotrophic lateral sclerosis, retinitis pigmentosa and cerebellar degeneration, and myelodysplastic syndromes, e.g. aplastic anaemia and ischaemic injury including myocardial infarction, stroke and reperfusion injury. Assays can also be
                                                                                                                                                                                                                                                            diseases, e.g. systemic lupus erythematosus and immune-mediated glomerulonephritis and viral infections, e.g. herpesvirus, poxvirus or adenovirus infection. Bad can also be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

```
antiarthritic, antiinflammatory and immunosuppressive activities, and can be used as an apoptosis inducer or inhibitor. BAD polypeptides and polynucleotides can be used for screening candidate compounds and drugs for activity that promote cell survival or apoptosis. Other uses include inducing or inhibiting apoptosis in a cell. Candidate compounds identified and (mutant) BAD polypeptides are useful in treating immunodeficiency diseases, neurodegenerative diseases, ischemic cell death, reperfusion cell death, wound healing, cancer, viral infections, lymphoproliferative conditions, arthritis, infertility, inflammation and autoimmune diseases. The present sequence repersents a specifically claimed human BAD mutant amino acid sequence from the present invention.

Modulating polypeptide levels in a cell, diagnosing and treating tumor, involves altering levels of proteins such as S-phase kinase associated proteins 1, 2 and cullin/CDC53 proteins -

Claim 5; Page 102-103; 162pp; English.

The invention relates to methods of altering the polypeptide levels in a cell, using proteins selected from S-phase kinase associated proteins 1 and 2 (SKP1, SKP2), SKP2-like proteins (ZF) and CUL-1 (a member of the cullin/ CDC53 family of proteins). The method is useful for altering the level of p27, cyclin E, Max, Mad, c.Myc, MDM2, p53, Bax, Bad or Bcl-2 polypeptide in a cell. SKP2 and SKP2-like protein levels are useful for detecting tumours, and in monitoring tumor treatment in a mammal. Agents that modulate interactions between SKP and target proteins are useful for treating tumours

ö ö The present sequence represents a protein of 166 amino acids. The sequence is disclosed as being a protein called BBC6 which regulates cell death through interaction with Bc1-2. The DNA may be used for the production of the recombinant protein, which can be used in unspecified therapeutic or diagnostic procedures, as a molecular weight marker, and to raise antibodies that can be used in unspecified diagnostic or therapeutic applications and to reduce or eliminate the biological activity of the BBC6 protein in vivo. Gaps Gaps Isolated BBC6 gene - encodes a protein that regulates cell death through interaction with Bcl-2 ; ö Length 168; Length 166; Indels Indels Score 139; DB 18; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes an isolated or synthetic polypeptide

(I) comprising a less than full length amino acid sequence of a mutant

(I) comprising a less than full length amino acid sequence of a mutant

(I) comprising a less than full length amino polypeptide (BAD) or its

fragment, which contains amino acid substitutions at Seril8 of a human

BAD, Seri55 of a murine BAD (longer murine BAD) or Seri13 of a murine

BAD (shorter murine BAD). (I) has immunostimulant, neuroprotective,

nootropic, antischaemic, vulnerary, cytostatic, antiviral,

antiarthritic, antiinflammatory and immunosuppressive activities, and

can be used as an apoptosis inducer or inhibitior. BAD polypeptides and

polynucleotides can be used for screening candidate compounds

for activity that promote cell survival or apoptosis. Other uses include

polynucleotides can be used for screening candidate compounds

inducting or inhibiting apoptosis in a cell. Candidate compounds

identified and (mutant) BAD polypeptides are useful in treating

immunodeficiency diseases. neurodegenerative diseases, ischaemic cell

death, reperfusion cell death, wound healing, cancer, viral infections,

lymphoproliferative conditions, arthritis, infertility, inflammation and

autoimmune diseases. The present sequence represents a specifically

claimed shorter murine BAD mutant amino acid sequence from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ó

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             for binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               IL-3 dependent cell line expression \mathcal{L}_{1}, and its also counters the death repressor activity of bcl-x(L). Bad competes with Bax for binding to bcl-x(L). Bad may be used to identify agents which inhibit its binding to bcl-z(L) to form heterodimers. Such agents may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents the murine bcl-x(L)/bcl-2 associated death promoter (Bad) gene. Bad is a 22.1 kD protein which interacts with bcl-2 and bcl-x proteins and regulates cell death. It has homology to the bcl-2-related family clustered in the BH1 and BH2 domain. Bad has been found to hybridise to bcl-x(L) and bcl-2 in yeast two-hybrid assays and in vivo in mammalian cells. Overexpressed Bad counters the death inhibitory activity of bcl-x(L), but is much less effective at countering the death inhibitory activity of bcl-x(L).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

Mutant BCL-XL/BCL-2 associated cell death regulator #1.

07-OCT-1998 (first entry)

```
The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell death regulator) proteins, having an amino acid other than Ser at position 112 and/or 136, relative to the murine BAD 204 as sequence. The present sequence is the murine BAD protein. Also described are: (1) fragments of mutant BAD protein able to decrease cell viability; (2) fusion proteins of mutant BAD protein a heterologous polypeptide that increases intracellular delibery. Mutant BAD proteins are used to treat or prevent diseases associated with reduced apoptosis, e.g. cancer, viral infection, lymphoproliferation, arthritis, infertility, infertility, infection, and autoimmune disease. Polyuuclectide sequences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins phosphorylated at specified Ser are used to screen for enhancers and inhibitors of serine-phosphatase. Inhibitors are potentially useful in treatment of excessive apoptosis such as AIDS, neurodegeneration, adjug or ischaemic cell death. The apoptotic status of cells is determined by measuring relative amounts of phosphorylated and non-phosphorylated on the specified Ser, forming a product that does not hosphorylated on the specified Ser, forming a product that does not heterodimerise with BCL-2 or BCL-XL but instead binds to 14-3-3 family proteins in the cytosol, thus promating cell survival. The mutants with
                                                                                                             Murine; mouse; BCL-XL/BCL-2 associated cell death regulator; BAD protein; serine substituted mutant; apoptosis; cancer; viral infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New mutant BAD polypeptide with phosphorylatable serine replaced useful for, e.g. treating reduced apoptosis such as in cancer or viral infection
                                                                           Murine BCL-XL/BCL-2 associated cell death regulator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score 120; DB 19;

The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell death regulator) proteins, having an amino acid other than Ser at position 112 and/or 136, relative to the murine BAD 204 aa sequence. The present sequence represents a mutant BAD protein. Also described are: (1) fragments of mutant BAD protein able to decrease cell viability; (2) fusion proteins of mutant BAD with a heterologous polypeptide that increases intracellular delivery. Mutant BAD proteins are used to treat or prevent diseases associated with reduced apoptosis, e.g. cancer, viral infection, lymphoproliferation, arthritis infertility, contranged inflammation and autoimmune disease. Polynucleotide sequences encoding inflammation and autoimmune disease. Polynucleotide sequences encoding contranged in a sa disease models or in drug screening. BAD proteins phosphorylated at specified Ser are used to screen for enhancers or transgenic animals for use as disease models or in drug screening. BAD proteins phosphorylated at specified Ser are used to screen for enhancers and inhibitors of serine-phosphatase. Inhibitors are potentially useful. In treatment of excessive apoptosis such as AIDS, neurodegeneration, aging or ischaemic cell death. The amounts of phosphorylated and non-phosphorylated BAD, by usual immunoassays. Mutant BAD proteins have greater death-promoting activity than wild-type BAD which can become phosphorylated on the specified Ser, forming a product that does not heterodimerise with BCL-2 or BCL-XL but instead binds to 14-3-3 family continued cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New mutant BAD polypeptide with phosphorylatable serine replaced useful for, e.g. treating reduced apoptosis such as in cancer or viral infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

Mutant BCL-XL/BCL-2 associated cell death regulator #3

07-OCT-1998 (first entry)

```
death regulator) proceins, having an amino acid other than Ser at proseint in a door 15, relative to the murine BAD 204 as sequence. The present sequence represents a mutant BAD protein. Also described are: (1) fragments of mutant BAD with a heterologous polypeptide that increases intracellular delivery. Mutant BAD proteins of mutant BAD with reduced apoptosis, e.g. cancer, viral infection, lymphoptoliferation, arthritis; infertility, inflammation and autoimmune disease. Polynucleotide sequences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins phosphorylated at specified Ser are used to screen for enhancers and inhibitors of serine-phosphatase. Inhibitors are potentially useful

                                                                                                                                                                                                                                                                                                                                                                                                          present invention describes mutant BAD (BCL-XL/BCL-2 associated cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                In treatment of excessive proptosis such as AIDS, neurodegeneration, aging or ischaemic cell death. The apoptotic status of cells is determined by measuring relative amounts of phosphorylated BAD, by usual immunoassays. Mutant BAD proteins have prosphorylated on the specified Ser, forming a product that does not heterodimerise with BCL-2 or BCL-XL but instead binds to 14-3-3 family proteins in the cytosol, thus promoting cell survival. The mutants with Scr substituted cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                          New mutant BAD polypeptide with phosphorylatable serine replaced useful for, e.g. treating reduced apoptosis such as in cancer or viral infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 120; DB 19; Length 204;

```

New mutant BAD polypeptide with phosphorylatable serine replaced useful for, e.g. treating reduced apoptosis such as in cancer or viral infection

Claim 7; Page 60-61; 95pp; English.

```
The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell death regulator) proteins, having an amino acid other than Ser at obsition 112 and/or 136, relative to the murine BAD 24 as sequence. The present sequence represents a mutant BAD protein. Also described are: (1) fragments of mutant BAD protein able to decrease cell viability; (2) fragments of mutant BAD with a heterologous polypeptide that increases intracellular delivery. Mutant BAD proteins are used to treat or prevent diseases associated with reduced apoptosis, e.g. cancer, viral infection, lymphoproliferation, arthritis, infertility, infertility infertility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 proteins in the cytosol, thus promoting cell survival. The mutants with
Ser substituted cannot bind 14-3-3.

                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents a novel serine-phosphorylated protein, BAD (Rel-2) associated cell death regulator). The serine residue is phosporylated in a post-translational modification and allows binding to the 14-3-3 protein which is a signal transduction regulator. Modulators of phosphorylated BAD, which act through inhibition/activation of a phosphoserine phosphatase, are useful for preventing/treating increased apoptosis in a cell. The increased apoptosis may result from immunodeficiency diseases, senescence, neurodegenerative disease, ischaemic cell death, reperfusion cell death, infertility and wound-healing. Decreased apoptosis may result from cancer, viral infection, lymphoproliferative conditions, arthritis, infertility,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               inflammation and autoimmune diseases. Measuring the amount of phosphorylated compared to unphosphorylated BAD polypeptide and/or total BAD in a cell is useful for determining the apoptotic state of a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BCl-XL/Bcl-2 associated cell death regulator; BAD; mutant; apoptosis;

The present invention describes an isolated or synthetic polypeptide

(I) comprising a less than full length amino acid sequence of a mutant

(I) comprising a less than full length amino acid sequence of a mutant

(I) comprising a mino acid substitutions at Serl18 of a human

(E) Ecl-XL/Bcl-2 associated cell death requiator polypeptide (BAD) or its

(E) fragment, which contains amino acid substitutions at Serl18 of a human

(E) BAD, Serl55 of a murine BAD (longer murine BAD) or Serl13 of a murine

(E) BAD, (Shorter murine BAD) (I) has immunostimilant, neuroprotective,

(E) notropic, antilachaemic, vulnerary, cytostatic, antiviral,

(E) antiarthritic, antilnflammatory and immunosuppressive activities, and

(E) can be used as an apoptosis inducer or inhibitor. BAD polypeptides and

(E) plynucleotides can be used for screening candidate compounds

(I) inducing or inhibiting apoptosis in a cell. Candidate compounds

(I) inducing or inhibiting apoptosis in a cell. Candidate compounds

(I) inducing or inhibiting apoptosis in a cell. Candidate compounds

(I) inducing or inhibiting apoptosis in a cell. Candidate compounds

(I) inducing or inhibiting apoptosis in a cell. Candidate compounds

(I) inducing or inhibiting apoptosis in a cell. Candidate compounds

(I) inducing or inhibiting apoptosis in a cell. Candidate compounds

(I) inducing or inhibiting apoptosis in a cell. Candidate compounds

(I) inducing or inhibiting apoptosis in a cell.

(I) candidate compounds

(I) inducing or inhibiting apoptosis in a cell.

(I) inducing or inhibiting apoptosis in a cell.

(I) inducing or inhibiting apoptosis in a cell.

(I) inducing inducing inducing a cell infamination and autoimmune diseases. The present amino acid sequence from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Epitope; murine; bcl-x(L)/bcl-2 associated death promoter; Bad; stroke;
cytostatic; antiviral; antiarthritic; antiinflammatory; wound healing; immunosuppressive; apoptosis inducer; apoptosis inhibitor; cancer; immunodeficiency disease; neurodegenerative disease; viral infection; ischaemic cell death; reperfusion cell death; arthritis; infertility; lymphoproliferative condition; inflammation; autoimmune disease.

The sequences given in AAR95155-67 represent epitopes derived from the murine bcl-x(L)/bcl-2 associated death promoter (Bad) polypeptide (see also AAR95168). Bad is a 22.1 KD protein which interacts with bcl-2 and bcl-x proteins and regulates cell death. It has homology to the bcl-2-c related family clustered in the BH1 and BH2 domain. Bad has been found to hyporatidise to bcl-x(L) and bcl-2 in yeast two-hybrid assays and in vivo in mammalian cells. Overexpressed Bad counters the death countering the death inhibitory activity of bcl-x(L), but is much less effective at countering the death inhibitory activity of bcl-2. Bad expression can accelerate apoptotic cell death induced by cytokine deprivation in an IL-3 dependent cell line expressing bcl-x(L), and its also counters the death repressor activity of bcl-x(L). Bad competes with Bax for binding to bcl-x(L). Bad may be used to identify agents which inhibit its binding to bcl-x(L). Bad may be used to treat an european activity diseases, immunodeficiency diseases, e.g. Albs,
  The sequences given in AAR95155-67 represent epitopes derived from the murine bcl-x(L)/bcl-2 associated death promoter (Bad) polypeptide (see also AAR95168). Bad is a 22.1 KD protein which interacts with bcl-2 and bcl-x proteins and regulates cell death. It has homology to the bcl-2-crelated family clustered in the BH1 and BH2 domain. Bad has been found to hybridise to bcl-x(L) and bcl-2 in yeast two-hybrid assays and in vivo in mammalian cells. Overexpressed Bad counters the death countering the death inhibitory activity of bcl-x(L), but is much less effective at countering the death inhibitory activity of bcl-2. Bad expression can accelerate apoptotic cell death induced by cytokine deprivation in an IL-3 dependent cell line expressing bcl-x(L), and its also counters the death repressor activity of bcl-x(L). Bad competes with Bax for binding to bcl-x(L). Bad may be used to identify agents which inhibit its binding to bcl-x(L). Carbit which inhibit its binding to bcl-x(L). In the countering pents may be used to treat an enrodes of the countering interaction and its also counters the death repressor activity of bcl-x(L). Bad competes with Bax for binding to bcl-x(L). Bad may be used to treat an enrodes of the counter

Cell 80:285-291(1995).
                                                                                                                                                                                                                                        -I-FUNCTION: PROMOTES CELL DEATH. SUCCESSFULLY COMPETES FOR THE BINDING TO BCL-X(L) AND BCL-2. THEREBY AFFECTING THE LEVEL HETERODIMERIZATION OF BOTH THESE PROTEINS WITH BAX. CAN REVERSE THE DEATH REPRESSOR ACTIVITY OF BCL-X(L), BUT NOT THAT OF BCL-2.
-I-SUBUNIT: FORMS HETERODIMERS WITH BCL-X(L) AND BCL-2, BUT NOT WITH BAX, MCL-1, Al, OR BCL-X(S).
-I-SIMILARITY: CONTAINS A BCL-2 HOMOLOGY DOMAIN 1 (BH1).
-I-SIMILARITY: CONTAINS A BCL-2 HOMOLOGY DOMAIN 2 (BH2).

VITO1. 141:1991-1997(1996).

-1- FUNCTION: CYTOPLASMIC INCLUSION PROTEIN HAS HELICASE ACTIVITY. IT
MAY BE INVOLVED IN REPLICATION.

-1- FUNCTION: UNCLEAR INCLUSION PROTEIN A HAS PROTECLYTIC ACTIVITY.

-1- PTM: VPG IS COVALENTLY LINKED TO THE GENOMIC RNA.

-1- PTM: VPG IS COVALENTLY LINKED TO THE GENOMIC RNA.

-1- PTM: VPG IS COVALENTLY LINKED TO THE GENOMIC RNA.

-1- PTM: THE VYBAL RNA OF POTYVIRUSES IS EXPRESED AS A SINGLE POLYPROTEIN WHICH UNDERGOES POSTTRANSLATIONAL PROTECLYTIC PROCESSING RESULTING IN THE PRODUCTION OF AT LEAST EIGHT INDIVIDUAL PROTECLY.

Submitted (JAN-1994) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: HELPER COMPONENT-PROTEINASE IS REQUIRED FOR APHID TRANSMISSION AND ALSO HAS PROTEOLYTIC ACTIVITY.
-!- FUNCTION: CYTOPLASMIC INCLUSION PROTEIN HAS HELICASE ACTIVITY.
-!- FUNCTION: NUCLEAR INCLUSION PROTEIN A HAS PROTEOLYTIC ACTIVITY.
-!- FUNTION: NUCLEAR INCLUSION PROTEIN A HAS PROTEOLYTIC ACTIVITY.
-!- PTM: VPG IS COVALENTLY LINKED TO THE GENOMIC RNA.
-!- PTM: THE VIRAL RNA OF POTYVIRUSES IS EXPRESSED AS A SINGLE POLYPROTEIN WHICH UNDERGOES POSTTRANSLATIONAL PROTEOLYTIC PROCESSING RESULTING IN THE PRODUCTION OF AT LEAST BIGHT

"Bad, a heterodimeric partner for Bcl-XL and Bcl-2, displaces Bax and promotes cell death.";

Cell Boi.285-291(1955).

-!-FUNCTION: PROMOTES CELL DEATH. SUCCESSFULLY COMPETES FOR THE BINDING TO BCL-X(L) AND BCL-2, THERRBY AFFECTING THE LEVEL HETERODIMERIZATION OF BOTH THESE PROFEINS WITH BAX. CAN REVERSE THE DEATH REPRESSOR ACTIVITY OF BCL-X(L), BUT NOT THAT OF BCL-2.

-!-SUBUNIT: FORMS HETERODIMERS WITH BCL-X(L), AND BCL-2, BUT NOT WITH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  HGGAGAVEIRSRHSSYPAGTEDDEGMGEEPSPFRGRSRSAPPNLWAAQRYGRELRRMSDE 120

VOLTAGE-DEPENDENT PVO_TYPE CALCIUM CHANNEL ALPHA-1A SUBUNIT (CALCIUM CHANNEL, L TYPE, ALPHA-1 POLYPEPTIDE ISOFORM 4) (BRAIN CALCIUM CHANNEL,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEDLINE=97053792; PubMed=8898206; Ophoff R.A., Terwindt G.M., Vergouwe M.N., van Eijk R., Oefner P.J., Ophoff R.A., Terwindt G.M., Vergouwe M.N., van Eijk R., Oefner P.J., Hoffman S.M.G., Lamerdin J.E., Mohrenweiser H.W., Bulman D.E., Lindhout D., van Ommen G.-J.B., Hofker M.H., Ferrari M.D., Frants R.R.; "Femilial hemiplegic migraine and episodic ataxia type-2 are caused by mutations in the Ca2+ channel gene CACNLIA4.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SOMET. CELI MOI. GENET. 21:279-284(1995).

-1- FUNCTION: VOLTAGE-SENSITIVE CALCIUM CHANNELS (VSCC) MEDIATE THE ENTRY OF CALCIUM IONS INTO EXCITABLE CELLS AND ARE ALSO INVOLVED ENTRY OF CALCIUM-DEPENDENT PROCESSES, INCLUDING MUSCLE CONTRACTION, HORMONE OR NEUROTRANSMITTER RELEASE, GENE EXPRESSION, CELL MOTILITY, CELL DIVISION AND CELL DEATH. THE ISOFORM ALPHA-1A GIVES RISE TO P AND/OR O'TYPE CALCIUM CURRENTS. PA'O-TYPE CALCIUM CHANNELS BELONG TO THE "HIGH-VOLTAGE ACTIVATED" (HVA) GROUP AND ARE BLOCKED BY THE FUNNEL TOXIN (FTX) AND BY THE OMEGA-AGATOXIN-IVA (OMEGA-AGA-IVA). THEY ARE HOWEVER INSENSITIVE TO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Margolis R.L., Breschel T.S., Li S.H., Kidwai A.S., Antonarakis S.E., McInnis M.G., Ross C.A.; "Characterization of cDNA clones containing CCA trinucleotide repeats
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TISSUE-Neuron;

Genet. 15:62-69(1997).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 derived from human brain."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cell 87:543-552(1996).
```

PRINTS; PR00167; CACHANNEL

IN A 1:1:11 RATIO. THE CHANNEL ACTIVITY IS DIRECTED BY THE PORDER FORMING AND VOLTAGE-SENSITIVE ALPHA-1 SUBUNIT. IN MANY CASES, THIS SUBUNIT IS SUFFICIENT TO GENERATE VOLTAGE-SENSITIVE CALCIUM CHANNEL ACTIVITY. THE AUXILIARY SUBUNITS BY DIRECTED BY THE PROBLET ALPHA-1 SUBUNIT IS SUFFICIENT TO GENERATE VOLTAGE-SENSITIVE CALCIUM CHANNEL ACTIVITY. THE AUXILIARY SUBUNITS BETA AND ALCHA-2/DELTA .

-1. SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

-1. ALTERNATIVE PRODUCTS: AT LEAST 7 ISOFORMS; BI-1/1A-2, BI-1(V1), BI-1-GCCAG/1A-1 (SHOWN HERE), BI-1/(Y1)-GGCAG, BI-1/(Y2)-GGCAG/1A-1 (SHOWN HERE), BI-1/(Y1)-GGCAG, BI-1(V2), BI-1(V2)-GCCAG/1A-1 (SHOWN HERE), BI-1-GCCAGAG, BI-1(V2), BI-1(V2)-GGCAG AND BI-1(V2)-V3); ARE PRODUCED BY ALTERNATIVE SPLICING.

-1. TISSUE SPECIFICITY: BRAIN-SPECIFIC; MAINLY FOUND IN CEREBELLUM, CEREBRAL CORTEX, THALAMUS AND HYPOTHALAMUS. NO EXPRESSION IN HEART, KIDNEY, LIVER OR MUSCLE: PREXIMILY FOUND IN CEREBELLAR GORDER, CONTAIN TO CREBEBLILAR GRANULE CELLS.

-1. DOMAIN: EACH OF THE FOUR INTERNAL REPEATS CONTAINS FIVE HYDROPHOBIC TRANSMEMBRANE SECHENTS (S1, S2, S3, S5, S6) AND ONE POSITIVELY CHARGED TRANSMEMBRANE SECHENTS (S1, S2, S3, S5, S6) AND SERIES OF POSITIVELY CHARGED AMINO ACIDS AT EVERY THIRD POSITION:

-1. POLYMORPHISM: THE POLY CAIN RECION OF CAONAIA IS POLYMORPHIZE: 6 TO INTERPRATE IN STINOCERBELLAR ATRAIRA 6 (SCAG) PATENTS: THERE SEEMS THE NEARMED THE REPEAT IN SHINOCERBELLAR ATRAIRA 6 (SCAG) PATENTS: THERE SEEMS THE NEORDED TO ABOUT 21 TO 30

REPEATS IN SHINOCERBELLAR THE REPEAT NUMBER AND EALLER ONSET OF COMPLEXES, CONSISTING OF ALPHA-1, ALPHA-2, BETA AND DELTA SUBUNITS

DISEASE: EXPANSION OF A CAG REPEAT IN THE CODING REGION OF CACNAIA IS THE CAUSE OF ONE FORM OF SPINOCEREBELLAR ATAXIA 6 (SCA6), AN AUTOSOMAL DOMININT DISORDER CHARACTERIZED BY SLOWLY PROGRESSIVE CEREBELLAR ATAXIA OF THE LIMBS AND GAIT, DYSAFTHRIA, NYSTAGWIS, AND MILD VIBRATORY AND PROPRIOCEPTIVE SENSORY LOSS. THESE SYMPTOMS ARE PROBABLY EXPLAINED BY SEVERE LOSS OF CEREBELLAR PURKINJE DISORDER. THE

DISEASE: DEFECTS IN CACNAIA ARE THE CAUSE OF FAMILIAL HEMIPLEGIC MIGRAINE (FHM), ALSO KNOWN AS MIGRAINE FAMILIAL HEMIPLEGIC 1 (MHPI), EDISODIC ATAXIA TYPE 2 (EA-2), ACETAZOLAMIDE RESPONSIVE COMMUN TYPES OF MIGRAINES. FHM, A RARE AUTOSOMAL DOMINANT SUBTYPE OF MIGRAINE WITH ARRA, IS ASSOCIATED WITH ICTAL HEMIPARESIS AND, IN SOME FAMILLES, PROGRESSIVE CERBEBLLAR ATROPHY. EA-2 IS ANOTHER AUTOSOMAL DOMINANT PROXYSMAL CEREBRAL DISEASE, CHARACTERIZED BY ACETOZOLAMIDE-RESPONSIVE ATTACKS OF CEREBELLAR ATAXIA AND MIGRAINE. LIKE SYMPTOMS, INTERICTAL NYSTAGMUS, AND CEREBELLAR

SIMILARITY: BELONGS TO THE CALCIUM CHANNEL ALPHA-1 SUBUNITS FAMILY.
